

**Specification:**

**References Cited:** Add to the existing list of references cited in a continuous descending patent numerical order the following patents per recommendation from the examiner.

<u>Patent No.</u>	<u>Date</u>	<u>Inventor(s)</u>
6,108,220	Aug., 2000	Franke
5,091,841	Feb., 1992	Tuusa
4,128,868	Dec., 1978	Gamble

**Prior Art of The Invention:** Append to the fourth paragraph after the fourth sentence by adding the following new sentences:

In a similar way, patent No. 5,091,841 by Tuusa dated February 25, 1992 also discusses the method for creating a pulse width modulator for the control of solid state switches in a three phase frequency converter and rectifier/inverter bridges yet lacks in discussing the method of filtering the final outputted power pulses. This filtering method is extremely important when again interfacing to a wide range of applied loads including and especially those of highly inductive impedances.
